

Environmental Policy

MUFF TRADING AG is committed to protecting the environment and fulfilling all relevant compliance and legal obligations. We share the idea of fighting climate change and the protection of our world, while it is still possible. We believe that current legislation is not sufficient to prevent climate change and protect the world properly. This is why we endeavor to play a pioneer role within the commodity industry. Being a boutique trading company, with small scale operations, we can undertake adjustments and improvements faster than our competition that are mainly large corporate businesses.

In general, we strive to minimize the impact of our business activities on the environment. We also expect our business partners and Stakeholders to establish and maintain internal procedures to minimize their environmental impact.

This commitment encompasses a range of activities of utmost priority for our company whose mission is to preserve and protect our environment and the place where we all live together. Among those activities, we ensure:

- Sourcing from projects that possess environmental mining licenses
- Saving energy where possible and/or usage of alternative and natural energy sources
- Reducing water usage and where not possible, the cleaning and recycling of water
- Reducing our global footprint by reducing our CO₂ emissions to the most minimum level
- Using proper waste and tailing management
- Having zero tolerance for deforestation in mining projects

All our business partners are encouraged to follow this pathway in order to consequently preserve the world we know. We urge them to appropriately communicate requirements to their employees and to their Stakeholders in the global supply chain.

Luca Muff

CEO & CHAIRMAN OF THE BOARD
